INDEX TO SUBJECTS

Admittance and asymmetry currents in squid axons 177
Alpha-1 chain, structure of, and small-angle X-ray diffraction of collagen 63
Analogues, synthetic pigment, of purple membrane protein 191
Angle, small, X-ray diffraction of collagen and primary structure of α1 chain 63
—, small, X-ray diffraction, determines human erythrocyte ghost membrane electron density profile 141
Asymmetry currents and admittance in squid axons 177
— currents, membrane, compared with sodium tail currents in *Myxicola* axons 7
Automated image analysis identifies cell cycle phases and subphases 163
Axons, *Myxicola*, sodium tail currents in, compared with membrane asymmetry currents 7
—, squid, asymmetry currents and admittance in 177
—, squid giant, single-file model of potassium transport in 125
—, squid giant, transient polarization currents in 275

Bacteriophage ϕ29, effects of temperature and ultraviolet radiation on multiplication 299
Bacteriorhodopsin, dark-adapted, light adaptation and photocycle of 185
— and bleaching and regeneration on purple membrane structure 285
—, electric field effects in 1
Bilayer membranes, planar, influence of solvent in negative lipid-calcium interaction in 199
Bladder, toad, diffusion of ^{133}Xe through 49
Bleaching and regeneration, effects on purple membrane structure of *Halobacterium halobium* 285
Boundary layer, water, diffusion of ^{133}Xe through 49

Calcium interaction with negative lipids in planar bilayer membranes, influence of solvent 199
Carbon-13 and proton magnetic resonance of mouse muscle 315
Cell cycle phases and subphases identified by automated image analysis 163
Chain, α1, and small-angle X-ray diffraction of collagen 63
Charges, membrane fixed, regulate ionic permeability of K, Na, and Cl 29
Chlorine, ionic permeability of, in crayfish nerve 29
Circular polarization of protein fluorescence, heterogeneity in 80
Collagen, small-angle X-ray diffraction of, and structure of α1 chain 63
Concentrations, normal ionic, and simulation of potassium currents in squid giant axon 125
Conformation, protein, revealed by fluorescence decay kinetics of tryptophan residues 74
Conformational changes of Cu^{2+}:Mb single crystal, by electron paramagnetic resonance 95
Constant, dielectric, error in measurement by electrode polarization 91
Copper $^{2+}$:myoglobin single crystal, electron paramagnetic resonance and conformational changes 95
Correlation spectroscopy, photon, determines particle size distributions in lipid vesicle suspensions 265
Crayfish nerve, ionic permeability of K, Na, and Cl in 29
Crystal, single, Cu^{2+}:Mb, electron paramagnetic resonance of 95
Currents, asymmetry, and admittance in squid axons 177
—, gating, in *Myxicola* axons 7
—, gating, potassium, simulated in giant squid axon 125
—, gating, in squid giant axon 275
—, potassium, simulated in squid giant axon at normal ionic concentrations 125
—, sodium tail, in *Myxicola* axons, compared with membrane asymmetry currents 7
—, transient polarization, in squid giant axon 275
Cycle, cell, phases and subphases identified by automated image analysis 163

Dark-adapted bacteriorhodopsin, light adaptation and photocycle of 185
Decay, fluorescence, of tryptophan residues, and protein conformation 74
Dense-body release from hydrated human platelets 307
Density profile, electron, of human erythrocyte ghost membrane determined by small-angle X-ray diffraction 141
Dielectric constant measurement by electrode polarization, error in 91
Diffraction, small-angle X-ray, determines human erythrocyte ghost membrane electron density profile 141
—, small-angle X-ray, of collagen and primary structure of α1 chain 63

Diffusion of water-soluble spin labels, factors restricting 205
— of ^{133}Xe through frog skin, toad bladders, and water boundary layer 49
Distribution of particle sizes, in lipid vesicle suspensions 265
DNA, mammalian, repeated nucleotide sequences in replicons of 117

Electric field effects in bacteriorhodopsin 1
Electrode polarization and error in measurement of dielectric constant 91
Electron density profile of human erythrocyte ghost membrane determined by small-angle X-ray diffraction 141
— paramagnetic resonance of Cu^{2+}:Mb single crystal 95
Environment, iron-sulfur, in rubredoxin 253
Erythrocyte ghost membrane, human, electron density profile of 141
Eye, lateral, of *Limulus*, phase-locked responses in 219

Fibers of skinned frog muscle, swelling in 103
Field effects, electric, in bacteriorhodopsin 1
Firing of retinal neuron, sustained, interspike intervals 241
Fixed charges, membrane, regulate ionic permeability of K, Na, and Cl 29
Fluorescence decay kinetics of tryptophan residues and protein conformation 74
—, heterogeneity of 73
—, protein, heterogeneity in circular polarization of 80
—, protein, heterogeneity and solute quenching of 77
— quenching, determines site heterogeneity of tryptophyl residues 73
Frog, swelling of skinned muscle fibers 103
— skin, diffusion of ^{133}Xe through 49

Gating currents in *Myxicola* axons 7
— currents, potassium, simulated at normal ionic concentration in giant squid axon 125
— currents in squid giant axon 275
Ghost membrane, human erythrocyte, electron density profile of 141
Giant axon of squid, single-file model of potassium transport in 125
— axon of squid, transient polarization currents in 275

Halobacterium halobium, effects of bleaching and regeneration on purple membrane structure 285
Heterogeneity in circular polarization of protein fluorescence 80
— and dynamics of protein conformation revealed by fluorescence decay kinetics of tryptophan residues 74
— of fluorescence 73
— of luminescence from proteins, overview 72
Heterogeneity in protein phosphorescence and optical detection of magnetic resonance 78
—, site, of tryptophyl residues in proteins determined by fluorescence quenching 73
— and solute quenching of protein fluorescence 77
Human erythrocyte ghost membrane electron density profile determined by small-angle X-ray diffraction 141
— platelets, hydrated, dense-body release from 307
Hydrated human platelets, dense-body release from 307
Hydrocarbon, large, linear, has no effect on phosphatidylcholine packing structure 83

Identification of cell cycle phases and subphases by automated image analysis 163
Image analysis, automated, identifies cell cycle phases and subphases 163
In situ observation of dense-body release from platelets 307
Interspike intervals during sustained firing of retinal neuron 241
Ionic concentrations, normal, and simulation of potassium currents in squid giant axon 125
— permeability of K, Na, and Cl in crayfish nerve regulated by membrane fixed charges and pH 29
Iron-sulfur environment in rubredoxin 253
Irradiation, ultraviolet, effects on bacteriophage $\phi 29$ 299

Labels, spin, water-soluble, restrictions on diffusion of 205
Lateral eye of *Limulus*, phase-locked responses in 219
Layer, water boundary, diffusion of ^{133}Xe through 49
Light adaptation of dark-adapted bacteriorhodopsin, and photocycle 185
Limulus lateral eye, phase-locked responses in 219
Lipid, negative, interaction with calcium in planar bilayer membranes, influence of solvent 199
— vesicle suspensions, particle size distribution in 265
Locked phase responses in *Limulus* lateral eye 219
Luminescence from proteins, site heterogeneity of, overview 72

Magnetic resonance, optical detection of, and heterogeneity in protein phosphorescence 78
— resonance, proton, of mouse muscle 315
Mammalian DNA, repeated nucleotide sequences in replicons of 117
Membrane asymmetry currents, compared with sodium tail currents in *Myxicola* axons 7
— fixed charges regulate ionic permeability of K, Na, and Cl 29
—, human erythrocyte ghost, electron density profile of 141

Membrane, planar bilayer, influence of solvent in negative lipid-calcium interaction in 199
— protein, purple, synthetic pigment analogues of 191
— purple, effects of bleaching and regeneration on structure 285
Mouse muscle, proton magnetic resonance and ^{13}C 315
Multiplication of bacteriophage $\phi 29$, effects of temperature and ultraviolet irradiation 299
Muscle fibers of frog, swelling in 103
—, mouse, proton magnetic resonance and ^{13}C 315
Myofilaments and swelling of frog muscle fibers 103
Myoglobin, electron paramagnetic resonance of copper in 95
Myxicola axons, sodium tail currents in, compared with membrane asymmetry currents 7

Negative lipids in planar bilayer membranes, interaction with calcium, influence of solvent 199
Nerve, crayfish, ionic permeability of K, Na, and Cl in 29
—, sodium tail currents in *Myxicola* axons 7
Neuron, retinal, variability of interspike intervals during sustained firing 241
Nuclear magnetic resonance, proton, of mouse muscle, and ^{13}C 315
Nucleotide sequences, repeated, in replicons of mammalian DNA 117

Objective identification of cell cycle phases and subphases by automated image analysis 163
Optical detection of magnetic resonance, use in detecting heterogeneity in protein phosphorescence 78
Organization of repeated nucleotide sequences in replicons of mammalian DNA 117
Osmotic pressure and swelling of frog muscle fibers 103

Packing structure, phosphatidylcholine, squalene has no effect on 83
Paramagnetic resonance, electron, of Cu^{2+}:Mb single crystal 95
Particle size distribution in lipid vesicle suspensions 265
Permeability, ionic, of K, Na, and Cl in crayfish nerve 29
pH and membrane fixed charges, regulate ionic permeability of K, Na, and Cl 29
'Phage $\phi 29$, effects of temperature and ultraviolet radiation on multiplication 299
Phase-locked responses in *Limulus* lateral eye 219
Phases and subphases, cell cycle, identified by automated image analysis 163
Phosphatidylcholine packing structure, squalene has no effect on 83
Phosphorescence, protein, heterogeneity in and optical detection of magnetic resonance 78
Photocycle and light adaptation of dark-adapted bacteriorhodopsin 185
Photon correlation spectroscopy determines particle size distribution in lipid vesicle suspensions 265
Pigment analogues, synthetic, of purple membrane protein 191
Planar bilayer membranes, influence of solvent in negative lipid-calcium interaction in 199
Platelets, human, hydrated, dense-body release from 307
Polarization, circular, of protein fluorescence, heterogeneity in 80
— currents in squid giant axon 275
—, electrode, and error in dielectric constant measurement 91
Potassium currents, simulated in squid giant axon at normal ionic concentrations 125
—, ionic permeability of, in crayfish nerve 29
—, transport in squid giant axon, single-file model, and simulation of potassium currents 125
Profile, electron density, of human erythrocyte ghost membrane determined by small-angle X-ray diffraction 141
Protein conformation revealed by fluorescence decay kinetics of tryptophan residues 74
— fluorescence, heterogeneity in circular polarization 80
— fluorescence and heterogeneity, solute quenching of 77
— luminescence, site heterogeneity of, overview 72
— phosphorescence, heterogeneity of, and optical detection of magnetic resonance 78
—, purple membrane, synthetic pigment analogues of 191
—, tryptophyl residues determined by fluorescence quenching 73
Proton magnetic resonance of mouse muscle 315
Purple membrane, photocycle and light adaptation of dark-adapted bacteriorhodopsin 185
— membrane protein, synthetic pigment analogues of 191
— membrane structure of *Halobacterium halobium*, effects of bleaching and regeneration 285

Quenching, fluorescence, and site heterogeneity of tryptophyl residues 73
—, solute, of protein fluorescence 77

Regeneration and bleaching, effects on purple membrane structure of *Halobacterium halobium* 285
Release of dense bodies from hydrated human platelets 307
Repeated nucleotide sequences in replicons of mammalian DNA 117
Replicons of mammalian DNA, repeated nucleotide sequences in 117
Residues, tryptophan, fluorescence decay kinetics reveals protein conformation 74
—, tryptophyl, site heterogeneity of 73

Resonance, electron paramagnetic, of Cu^{2+}:Mb single crystal 95
Resonance, magnetic, and heterogeneity in protein phosphorescence 78
—, proton magnetic, of mouse muscle 315
Retinal, synthetic pigment analogues of 191
Retinal neuron, variability of interspike intervals during sustained firing 241
Rhodopsin, bacterio-, bleaching and regeneration effects on purple membrane structure 285
—, bacterio-, dark-adapted, light adaptation and photocycle of 185
—, bacterio-, electric field effects in 1
Rubredoxin, iron-sulfur environment in 253

Sarcoplasmic reticulum and swelling of frog muscle fibers 103
Simulation of potassium currents at normal ionic concentrations in squid giant axons 125
Single crystal, Cu^{2+}:Mb, electron paramagnetic resonance of 95
Single-file model for potassium transport in squid giant axon. Simulation of potassium currents at normal ionic concentrations 125
Site heterogeneity of luminescence from proteins, overview 72
— heterogeneity of tryptophyl residues in proteins determined by fluorescence quenching 73
Size distribution of particles in lipid vesicle suspension 265
Skin, frog, diffusion of ^{133}Xe 49
Skinned muscle fibers of frog, swelling in 103
Small-angle X-ray diffraction of collagen and primary structure of α l chain 63
— X-ray diffraction, determines human erythrocyte ghost membrane electron density profile 141
Sodium, ionic permeability of, in crayfish nerve 29
— tail currents in *Myxicola* axons compared with membrane asymmetry currents 7
Soluble spin labels, restrictions on diffusion of 205
Solute quenching of protein fluorescence 77
Solvent, influence on negative lipid-calcium interaction in planar bilayer membranes 199
Spectroscopy, photon correlation, determines particle size distributions in lipid vesicle suspensions 265
Spikes, intervals between, during sustained firing of retinal neuron 241
Spin labels, water-soluble, restrictions on diffusion of 205
Squalene has no effect on phosphatidylcholine packing structure 83
Squid axons, asymmetry currents and admittance in 177
— giant axon, single-file model of potassium transport in 125
Squid giant axon, transient polarization currents in 275
Structure, packing, of phosphatidylcholine, non-effect of squalene 83
—, purple membrane, effects of bleaching and regeneration 285
Subphases and phases, cell cycle, identified by automated image analysis 163
Sulfur-iron environment in rubredoxin 253
Suspensions of lipid vesicles, particle size distribution in 265
Sustained firing of retinal neuron, interspike intervals 241
Swelling of skinned muscle fibers of frog 103
Synthetic pigment analogues of purple membrane protein 191

Tail currents, sodium, in *Myxicola* axons, compared with membrane asymmetry currents 7
Temperature effects on multiplication of bacteriophage ϕ29 299
Toad bladder, diffusion of ^{133}Xe through 49
Transient polarization currents in squid giant axon 275
Transport of potassium in squid giant axon, single-file model, and simulation of potassium currents 125
Tryptophan residues, fluorescence decay kinetics reveals protein conformation 74
Tryptophyl residues, site heterogeneity of 73

Ultraviolet irradiation effects on multiplication of bacteriophage ϕ29 299

Variability of interspike intervals during sustained firing of retinal neuron 241
Vesicle suspensions, lipid, particle size distribution in 265

Water boundary layer, diffusion of ^{133}Xe through 49
Water-soluble spin labels, restrictions on diffusion 205

Xenon-133, diffusion through frog skin, toad bladders, and water boundary layer 49
X-ray diffraction of collagen, small-angle, and primary structure of α l chain 63
— diffraction, small-angle, determines human erythrocyte ghost membrane electron density profile 141
—, and repeated nucleotide sequences in replicons of mammalian DNA 117

BIOPHYSICAL JOURNAL

published monthly for the Biophysical Society
by The Rockefeller University Press
edited by the Biophysical Society in cooperation
with the Division of Biological Physics
of The American Physical Society

Editorial Board

Copyright © 1977 by The Rockefeller University Press

CONTENTS

July 1977 volume 19 number 1

1 ELECTRIC FIELD EFFECTS IN BACTERIORHODOPSIN. *R. Shinar, S. Druckmann, M. Ottolenghi, and R. Korenstein*

7 CHARACTERISTICS OF SODIUM TAIL CURRENTS IN *MYXICOLA* AXONS. COMPARISON WITH MEMBRANE ASYMMETRY CURRENTS. *C. L. Schauf, J. O. Bullock, and T. L. Pencek*

29 IONIC PERMEABILITY OF K, Na, AND Cl IN CRAYFISH NERVE. REGULATION BY MEMBRANE FIXED CHARGES AND pH. *Alfred Strickholm and Hulda R. Clark*

49 DIFFUSION OF ^{133}Xe THROUGH FROG SKINS, TOAD BLADDERS, AND WATER BOUNDARY LAYERS. *Gerald L. Pollack*

63 INTERPRETATION OF THE SMALL-ANGLE X-RAY DIFFRACTION OF COLLAGEN IN VIEW OF THE PRIMARY STRUCTURE OF THE α1 CHAIN. *W. Claffey*

Symposium on Site Heterogeneity of Luminescence from Proteins

72 CHAIRMAN'S OVERVIEW. *J. W. Longworth*

73 HETEROGENEITY OF FLUORESCENCE. *Carl Formoso*

73 SITE HETEROGENEITY OF TRYPTOPHYL RESIDUES IN PROTEINS DETERMINED BY FLUORESCENCE QUENCHING. *C. A. Ghiron*

74 HETEROGENEITY AND DYNAMICS OF PROTEIN CONFORMATION REVEALED BY FLUORESCENCE DECAY KINETICS OF TRYPTOPHAN RESIDUES. *Amiram Grinvald and Izchak Z. Steinberg*

77 HETEROGENEITY AND SOLUTE QUENCHING OF PROTEIN FLUORESCENCE. *S. S. Lehrer*

78 IS OPTICAL DETECTION OF MAGNETIC RESONANCE USEFUL IN DETECTING HETEROGENEITY IN PROTEIN PHOSPHORESCENCE? *August H. Maki*

80 HETEROGENEITY IN THE CIRCULAR POLARIZATION OF PROTEIN FLUORESCENCE. *J. Schlessinger and I. Z. Steinberg*

Brief Communication

83 THE NONEFFECT OF A LARGE LINEAR HYDROCARBON, SQUALENE, ON THE PHOSPHATIDYLCHOLINE PACKING STRUCTURE. *S. A. Simon, L. J. Lis, R. C. MacDonald, and J. W. Kauffman*

Letter to the Editor

91 Error Introduced in the Dielectric Constant Measurement by Electrode Polarization. *Banu Onaral*

August 1977 volume 19 number 2

95 Electron Paramagnetic Resonance of Cu^{2+}:Mb Single Crystal. Conformational Changes. *O. R. Nascimento, S. Costa Ribeiro, and G. Bemski*

103 Swelling of Skinned Muscle Fibers of the Frog. Experimental Observations. *Robert E. Godt and David W. Maughan*

117 The Organization of Repeated Nucleotide Sequences in the Replicons of Mammalian DNA. *Michael R. Mattern and Robert B. Painter*

125 A Single-File Model for Potassium Transport in Squid Giant Axon. Simulation of Potassium Currents at Normal Ionic Concentrations. *H.-H. Kohler*

141 The Determination of the Electron Density Profile of the Human Erythrocyte Ghost Membrane by Small-Angle X-Ray Diffraction. *E. H. Pape, K. Klott, and W. Kreutz*

163 Objective Identification of Cell Cycle Phases and Subphases by Automated Image Analysis. *C. Nicolini, F. Kendall, and W. Giaretti*

Brief Communications

177 Asymmetry Currents and Admittance in Squid Axons. *H. M. Fishman, L. E. Moore, and D. Poussart*

185 On the Photocycle and Light Adaptation of Dark-Adapted Bacteriorhodopsin. *Ofra Kalisky, Chmouel R. Goldschmidt, and Michael Ottolenghi*

191 Synthetic Pigment Analogues of the Purple Membrane Protein. *Fumio Tokunaga, Rajni Govindjee, Thomas G. Ebrey, and Rosalie Crouch*

199 Interaction of Calcium with Negative Lipids in Planar Bilayer Membranes. Influence of the Solvent. *J. P. Laclette and M. Montal*

September 1977 volume 19 number 3

205 Factors Restricting Diffusion of Water-Soluble Spin Labels. *Alec D. Keith, Wallace Snipes, Rolf J. Mehlhorn, and Thomas Gunter*

219 PHASE-LOCKED RESPONSES IN THE *LIMULUS* LATERAL EYE. THEORETICAL AND EXPERIMENTAL INVESTIGATION. *C. Ascoli, M. Barbi, S. Chillemi, and D. Petracchi*

241 A MODEL FOR THE VARIABILITY OF INTERSPIKE INTERVALS DURING SUSTAINED FIRING OF A RETINAL NEURON. *Michael W. Levine and Jeremy M. Shefner*

253 THE IRON-SULFUR ENVIRONMENT IN RUBREDOXIN. *Bruce Bunker and Edward A. Stern*

265 DETERMINATION BY PHOTON CORRELATION SPECTROSCOPY OF PARTICLE SIZE DISTRIBUTIONS IN LIPID VESICLE SUSPENSIONS. *Jeffrey H. Goll and Gregory B. Stock*

275 TRANSIENT POLARIZATION CURRENTS IN THE SQUID GIANT AXON. *M. W. P. Strandberg*

285 EFFECTS OF BLEACHING AND REGENERATION ON THE PURPLE MEMBRANE STRUCTURE OF *HALOBACTERIUM HALOBIUM*. *B. Becher and J. Y. Cassim*

Brief Communications

299 THE EFFECTS OF TEMPERATURE AND ULTRAVIOLET IRRADIATION ON MULTIPLICATION OF BACTERIOPHAGE ϕ29. *Lyndon L. Larcom and Nitin H. Thaker*

307 *IN SITU* OBSERVATION OF DENSE-BODY RELEASE FROM HYDRATED HUMAN PLATELETS. *Jonathan L. Costa and S. W. Hui*

315 CARBON-13 AND PROTON MAGNETIC RESONANCE OF MOUSE MUSCLE. *B. M. Fung*

321 INDEXES TO VOLUME 19
